Topics within the scope of the track:

Track 6 on Computational Intelligence and Modern Heuristics in Automation aims to gather researchers reporting recent results in the development of computational intelligence, intelligent systems and control, data mining in automation and industrial applications. The track is also seeking papers related to modern heuristics criteria, methods, and principles in factory automation that are in practice “good quality” solutions.

The topics of this track include but are not limited to:

- Intelligent Systems and Control, Modern Heuristics, and Data Mining in automation and industrial applications
- Neural/Fuzzy/Evolutionary approaches in automation
- Modern heuristics methods in factory automation based on predictive, adaptive control, recognition, navigation, motion control, competitive, self-organizing learning, and clustering
- Computational Intelligence in security, reliability, and fault-tolerance in automation
- Ant colonies optimization and swarm intelligence in automation
- Machine learning, Support Vector Machines, Expert Systems

Submission of Papers: The working language of the conference is English. Two types of submissions are solicited. Long Papers – limited to 8 double column pages in a font no smaller than 10-points. Work-in-Progress and Industry practice – limited to 4 double column pages in a font no smaller than 10-points. Manuscripts must be submitted electronically in PDF format, according to the instructions contained in the Conference web site

Best Paper Award: Best paper awards in Factory Automation and Emerging Technologies will be presented at the conference banquet dinner. Authors of outstanding papers will be invited to submit a revised version of their papers for publication in a special section in IEEE Transactions on Industrial Informatics.
